NAME GRADE OUT OF 15 PTS

Answer each of the next questions separately and show your correct work for a full credit.

1. (3pts) Antiderivatives: u-substitution (3pts) -SHOW ALL STEPS for a all full credit

(a) 
$$\int \frac{1}{x \ln x} dx$$

(b) 
$$\int \frac{x}{(8-2x^2)^3} dx$$

(c) 
$$\int (4+3x)^4(3) dx$$

(a). Let  $u = l_{nx}$   $f_{u} = \frac{1}{x} l_{x} s_{0}$  we have  $\int \frac{1}{u} du$ 

= ln/u/= ln//lnas/]+c

(b) u = 8-2x2 -> du = -4xdx -> -fm = xdx

So  $\int \frac{1}{u^3} \left( -\frac{1}{4} du \right) = -\frac{1}{4} \int u^{-3} du = -\frac{1}{4} \left( -\frac{1}{2} u^{-2} \right) + c$ 

$$= \frac{1}{8u^2} + C = \frac{1}{8(8-2x^2)^2} + C$$

(c) u = 4+3x -> du = 3xdx ->

Sugdu -> = us+c -> = (4+3x)5+c

.

(c) Evaluate 
$$\int_0^1 \frac{x - \sqrt{x}}{6} dx$$

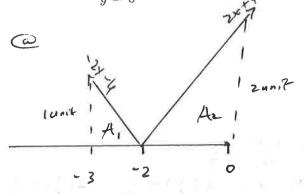

$$\begin{aligned}

## 3. Area under the curve and FTC (3pts) (No decimal answer!)

- (a) Calculate the area above the x-axis, and below the graph of g(x) = |2x + 4| which is bounded by x = -3 and x = 0 using:
  - (i) geometry
- (ii) integration (show your work!).
- (b) Find the area of the region bounded by the graphs of the equations.  $y = \frac{1}{x}$ , x = 1, x = e,

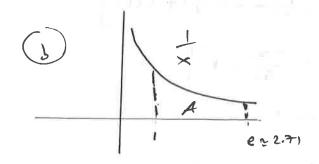

(i) 
$$A_{rea} = A_1 + A_2$$
  
=  $\frac{1}{2}(1)(2) + \frac{1}{2}(2)(4)$   
=  $1 + 4 = \sqrt{5}$  unit 2

$$(ii) \int_{-(2x+4)dx}^{-2} + \int_{-2}^{0} (2x+4)dx$$

$$= -2 \left[ + \frac{1}{2} x + 4x \right]_{-2}^{-2} + 2 \left[ \frac{1}{2} x^{2} + 2x \right]_{-2}^{0}$$

$$= 1+4$$

$$= 5 \text{ unif } 2$$

$$A = \int_{-\infty}^{\infty} \frac{1}{x} dx = \left[ \frac{\ln |x|}{x} \right]_{1}^{\infty}$$

$$= \ln \alpha - \ln \alpha$$

## 4. Area approximation: Riemann Sums (5pts) (up to four decimals answer!)

- (a) Use a **Left** Sum with **four** rectangles of equal width to approximate the area under the graph of  $f(x) = x^3$ , between x = 0 and x = 1.
- (b) Use a **Right** Sum with **four** rectangles of equal width to approximate the area under the graph of  $f(x) = x^3$ , between x = 0 and x = 1.
- (c) From the previous answers in (a) and (b), what would be the area of the region using a Trapezoidal rule?
- (d) What is the exact value of the region? (use FTC rule)
- (e) What is the percentage of error when you compare the value found in (c) to the one found in (d)?

Found in (a):

$$f(x) = \frac{1}{4}$$

$$hecoghty: f(0) = 0; f(\frac{1}{2}) = \frac{1}{3}, f(\frac{1}{4}) = \frac{1}{64}$$

$$f(\frac{2}{4}) = \frac{27}{64}; f(1) = 1$$

$$= \frac{1}{4} \left[ f(0) + f(\frac{1}{4}) + f(\frac{1}{2}) + f(\frac{2}{3}) \right]$$

$$= \frac{1}{4} \left[ 0, + \frac{1}{64} + \frac{1}{3} + \frac{27}{64} \right]$$

$$= \frac{1}{4} \left[ f(\frac{1}{4}) + f(\frac{1}{2}) + f(\frac{3}{4}) + f(1) \right]$$

$$= \frac{1}{4} \left[ \frac{1}{64} + \frac{1}{3} + \frac{27}{64} + \frac{1}{3} \right]$$

$$= \frac{1}{4} \left[ \frac{1}{4} + \frac{1}{4} + \frac{27}{64} + \frac{1}{3} \right]$$

$$= \frac{1}{4} \left[ \frac{1}{4} + \frac{1}{4} + \frac{27}{64} + \frac{1}{3} \right]$$

$$= \frac{1}{4} \left[ \frac{1}{4} + \frac{1}{4} + \frac{27}{64} + \frac{1}{3} \right]$$

$$= \frac{1}{4} \left[ 1 - 0 \right] = \frac{1}{4} = .25$$

$$\text{(e) Error: } \left[ \frac{1}{4} + \frac{25}{4} - \frac{25}{4} + \frac{1}{3} + \frac{25}{4} - \frac{25}{4} \right]$$
