University of North Georgia
Summer 2015
Quiz #2

Name: Key Date: June 9, 2015

1. If you guess at 10 true-false questions, how many different ways can you fill in the ten answers? Show your reasoning!

$2 \rightarrow T \text{ or } F, 10 \text{ slots (questions)} = n$

$2^n = 2^{10} = 1024 \text{ ways}$

2. Decide whether the two sequences of operation will give the same results: adding two numbers x and y , then dividing the result by 3 or dividing x and y by 3, then adding the results. Show your work!

$$\frac{x + y}{3} \stackrel{?}{=} \frac{x}{3} + \frac{y}{3}$$

Common

$$= \frac{x + y}{3}$$

yes, the same.

3. To celebrate Dunder Mifflin's 40th anniversary, Dwight has made a 40-foot-long sandwich. The sandwich is cut into three unequal pieces. The longest piece is three times as long as the middle piece, and the shortest piece is 5 feet shorter than the middle piece. What are the lengths of the three pieces? It is important to use your *four problem-solving steps* and to show your process for solving the problem.

$$\text{Short Piece: } x - 5 = 9 - 5 = 4 \text{ feet}$$

$$\text{Middle Piece: } x \text{ feet} = 9 \text{ feet}$$

$$\text{Long Piece: } 3x = 3(9) = 27 \text{ feet}$$

$$(x - 5) + x + 3x = 40$$

$$x + x + 3x = 45$$

$$5x = 45$$

$$x = 9$$

$x - 5$	x	$3x$
---------	-----	------

 $= 40 \text{ feet}$

$$9 - 5 = 4 \quad 9 \quad 3(9) = 27$$

Check

$$4 + 9 + 27 = 40$$

$$13 + 27 =$$

$$40 = 40 \checkmark$$
