#8) find LCD: 10

$$10 \left(\frac{12}{1} - \frac{25x}{1} - \frac{67}{1} = -\frac{15}{1}(x-6) \right)$$

$$126 - 25x - 67 = -15(x-6)$$

$$126 - 25x - 67 = -15x + 90$$

$$\frac{-31}{10} = \frac{10x}{10}$$

$$-\frac{31}{10} = x$$
